

Abstract

The invention describes a shower and a faucet apparatus which includes a showerhead (or faucet) and a feeding mechanism, the showerhead (or faucet) includes a water inlet, a water outlet and a water passageway connecting said water inlet and outlet. A feeding aperture is provided on the showerhead (or faucet) connected to the feeding mechanism and the feeding mechanism includes a pump to deliver a substance through the feeding aperture into the passageway for subsequent dispensing through the water outlet. This invention provides a very user friendly water and substances dispensing system particularly useful for the public in the enjoyment of a shower.
